CERTIFICATION OF DEATH (SCOTLAND) BILL
Medical Reviewer System - Update

This note provides an update on recent developments on the Certification of Death (Scotland) Bill. Following scrutiny of the evidence submitted by stakeholders to the Health & Sport Committee and evidence sessions on 24 November and 1 December 2010, the Minister for Public Health & Sport gave evidence on 15 December. At that session, the Minister outlined the following proposals for the Committee’s consideration:

- the introduction of a new level of real-time scrutiny - to be called Level 1 reviews - to be applied to 25% of deaths in Scotland\(^1\), selected randomly by the GROS computer system;

- an increase of random real-time Level 2 reviews i.e. the comprehensive reviews from 500 to 1,000 cases annually.

These enhancements will be complemented by targeted reviews initiated by medical reviewers (MRs) and interested person reviews (the sum of targeted and interested person reviews is estimated at around 1,000 cases annually).

**Level 1 reviews**

- Level 1 reviews will be conducted by MRs and will involve checking the Medical Certificate of Cause of Death (MCCD) form and speaking to the certifying doctor to obtain background clinical information.

- The MR will discuss any concerns with the certifying doctor (or another doctor in the team) by phone and any disagreements will be covered by the same procedure as currently set out in the Bill (sections 10 and 11).

- This will allow the MR to check quality and cause of death and to query anything unusual. It will allow discrepancies to be picked up and can act as a trigger for a comprehensive Level 2 review if considered necessary or where there is any disagreement.

**Level 2 reviews**

- The random sample of Level 2 reviews will be increased to 1,000 cases and this increased sample size will provide a benchmark for the proportion of queried MCCDs to within a 2% margin of error; the key purpose of this sample is to provide a quality benchmark at an all Scotland level and to measure improvements.

- Level 2 reviews involve the MR checking the MCCD and relevant medical records and any other appropriate documents associated with the death such as results of investigations; discussing the death with the certifying doctor and other relevant clinical and healthcare staff, as required; discussing the death with the family of the

\(^1\) 13,464 deaths based on 2009 figures.
deceased or an informal carer, as required; and considering any other relevant
evidence such as (arranging) to view the body, if necessary.

- Data from reviews (random Level 1 and Level 2 reviews, targeted reviews and
interested person reviews) will feed into a comprehensive audit and quality
improvement programme based on triangulating a number of data sources - including
Hospital Standardised Mortality Ratios, coding checks from GROS and statistical
analysis from the national statistician.

**Delays**

- Level 1 reviews are expected to take no more than 30 minutes (this may stretch over
several hours / overnight, depending on how quickly the MR can speak to the
certifying doctor or team member). Level 2 reviews are expected to take around 3
hours and to complete on average within one or two days.

- The Bill’s expedited procedure (included for circumstances requiring an accelerated
process, including for reasons of faith) can be applied for in relation to both Level 1
and 2 reviews.

- Administrative implementation issues will be tested in test sites including any specific
issues related to faith groups and rural communities.

**Costs and numbers of MRs**

- These proposals will cost an additional c. £640k pa (plus marginal additional start-up
costs) and involve a total of 10 medical reviewers and a senior medical reviewer with
assistants. Any additional Level 2 reviews arising from Level 1 reviews will require
further staff capacity and involve further additional resource costs. These will be
identified during the test site phase.

- The additional costs will be borne by the Scottish Government and not be added to
the proposed public fee of around £30.

**Benefits**

- The additional Level 1 reviews and the 50% increase in random Level 2 reviews will
provide a greater degree of deterrence and reassurance to the public and a greater
level of independent scrutiny. These additional reviews will also enhance the quality
assurance aspects of our approach via the links in the new system to education and
training and clinical governance.

- We believe these proposals maintain the balance between the need to keep costs to
the public purse and families proportionate, the need to minimise undue delay for
bereaved families, while providing a death certification system which offers
independent, effective scrutiny.
