

TUESDAY 21ST NOVEMBER 2023

Visit to The Precision Organic R&D Facilities

The Faunus Group are developing an innovative environmentally-friendly alternative to burial and cremation.

The methodology is based on scientific research and learning. After over two years of developing the process, the Faunus Group are now carrying out trials in both the UK and the USA. Their UK facility features working models that are currently being used for data gathering. Analysis of the data will allow the process to be refined for human use. It is expected that human facilities will be available in the UK very soon.

The Faunus Group have kindly agreed to host a visit for ICCM members to view the R&D facilities and to learn more about the process and plans for how this will be introduced in the UK.

Attendance, including lunch and refreshments, is free for ICCM Members, and £95.00 + VAT for non-members.

An ICCM quality event

One day site visit

Important update for all in the bereavement sector

Innovative technology

Free to attend for ICCM Members
